Sara B.Zaki

I worked on parts of the iDecide app user interface. Throughout the development of this project, from the ideas, to the planning until the very end, I have looked up to our amazing team leader Park. I have learned a great deal this semester. Thank you.

Kyungyeon Park

It was the hardest class of the four years I took. I found that individual abilities are also important for the team to perform well. Through this team project, I learned a lot, such as writing documents and managing the project. If the class is to be held next semester, I wish the team formation would be free.

Hogi Min

My part is database management. I made email/password login (not google login). I made web crawler and crawl laptop data from noteb.com. But, our target is korean and the data I crawled is international laptop, so it is useless anyway OMG! I learned a lot and realized the importance of documentation. I deeply sorry to our teammates and great thanks to our team leader!

Hanwoul Lee

I have worked on DB part. This is a first co-development project, and Co-vid has made some difficulties, but thanks to great colleagues, we have been able to proceed. Thanks to our teammates.

**Thank
You**
